Education

Brunel University London Artificial Intelligence, MSc	London, U.K Nov 2025
Bilkent University Computer Science, BSc	Ankara, Turkiye June 2024

Experience

Admin Please <i>Full Stack Developer</i>	London, U.K Nov 2025 – Sep 2025
- Integrated Google and OpenAI APIs into advanced data extraction workflows and developed automated systems to support continuous, scalable operations. - Designed and developed a responsive B2C productivity management web application using Angular and TypeScript. Implemented reusable components for high efficiency and clarity. - Built backend services using Encore TS and Docker, applying RESTful API best practices and ensuring reliable data exchange with PostgreSQL databases. Built relational tables using Prisma ORM. - Successfully implemented more than 100 complex features for the project, ensuring customer satisfaction.	
AlgoritiX (Part-time) <i>Full Stack Developer</i>	Maryland, USA (remote) Oct 2023 – Sep 2024
- Developed and deployed a full-stack web application from scratch. It is used in the computer architecture classes of the <i>University of Maryland</i>. Used React, Node.js, Google Cloud Console, and AWS. - Modeled and managed backend services using AWS Lambda and AWS S3 with NoSQL, implementing optimized functions and data migrations. - Integrated cloud-based RESTful APIs and deployed applications to Google Firebase. Built a secure authentication system for students and admin use cases, and optimised performance for speed and efficiency, which can handle 1000+ users at the same time.	
Bilkent University (Part-time) <i>Python Tutor</i>	Ankara, Turkiye Dec 2023 – June 2024
- Provided academic support and one-on-one guidance to undergraduate students in an introductory Python course. Helped over 120 students pass the course with exceptional grades. - Assisted students in understanding variables, control structures, functions, and basic data structures.	
Turkish Ministry of Interior <i>Software Engineer, Intern</i>	Ankara, Turkiye June 2023 – Aug 2023
- Implemented secure data transmission features using encryption protocols and techniques. - Contributed to back-end development while collaborating with senior developers to troubleshoot issues, enhance site performance, and ensure compliance with security standards. Used FastAPI and Python	
Karel Electronics Inc. <i>Software Engineer, Intern</i>	Ankara, Turkiye Jun 2022 – Aug 2022
- Developed a fall detection algorithm for IoT devices using machine learning and big data technologies. - Developed skills in Python, TensorFlow, and Keras. Organised a talk about big data and provided information about recent technologies of artificial intelligence, attended by more than 100 employees.	

Additional Experiences & Projects

VR Rehabilitation with ML and DL models ([Github Link](#))

- Built a Unity-based VR rehabilitation application for real-time gait analysis using time-series data.
- Implemented and compared six ML and DL models (Random Forest, SVM, Gradient Boosting, RNNs, 1D-CNN, Transformers).
- Designed data pipelines for sensor processing, labelling, and model training.
- Focused on accuracy, latency, and deployment efficiency for seamless Unity integration.

LLM Web Application

- Deployed and configured a self-hosted Web Application integrated to google/gemma-3-1b-it Hugging Face model.
- Fine-tuned successfully for specific purposes and deployed the application on a domain.
- Handled server setup, security configurations, and routine maintenance for reliable uptime and performance
- Gained experience in cloud infrastructure, Linux server management, and secure data hosting practices

Intelligent Food Recommendation App ([Github Link](#))

- Developed the front-end of a web application that suggests foods based on users' previous comments and preferences
- Built dynamic and responsive interfaces using React, Bootstrap, and TypeScript
- Focused on enhancing user experience through clean design and intuitive interaction flows
- Strengthened skills in component-based architecture, state management, and front-end best practices

AI-Based Hockey Match Event Detection (Computer Vision)

- Developed a computer vision pipeline to automatically analyze hockey match footage and classify game events.
- Built and trained deep learning models using Python, OpenCV, and PyTorch/TensorFlow.
- Implemented temporal event recognition by combining frame-level visual features with sequential analysis.
- Designed a complete data processing pipeline, including video preprocessing, annotation, augmentation, model training, and performance evaluation using precision, recall, and F1-score.

Certifications & Honors

- [AWS Certified AI Practitioner — Amazon Web Services \(AWS\)](#)
- [AWS Certified Machine Learning Engineer – Associate — Amazon Web Services \(AWS\)](#)
- [AWS Certified Machine Learning – Specialty — Amazon Web Services \(AWS\)](#)
- Awarded a British Council Scholarship supporting MSc Artificial Intelligence studies at Brunel University London.
- The best project chosen in the CS 319 Object-Oriented Software Engineering course (team). 2023.
- Turkish National University Selection Exam (YKS), Ranked 14700/2.5m (0,0058%), 2019.

Interests

University Societies

Actively engaged in university social life by participating in various student societies, including Chess, Snowboarding, Motorbike, Psychology, and Freestyle Dance clubs.

Sports

Enthusiastic about a wide range of sports and outdoor pursuits, including Snowboarding, Ice Hockey, Tennis, Motorbiking, Skating, Football, and Volleyball. Enjoy both individual and team-based activities that promote discipline, coordination, and resilience.
